Experience

- **Công ty TNHH Groot.** HCMC, VN
Software Engineer September. 2025 - Present
 - **EngiHire**
 - * Domain: HRM.
 - * Position: Fullstack.
 - * Technologies and Responsibilities:
 - * Frontend:
 - Architected and structured a highly scalable frontend codebase using **Vue.js (TypeScript)** and **pnpm monorepo/workspaces**, optimizing dependency management and developer workflow efficiency.
 - Designed a modular UI ecosystem by engineering reusable, accessible components with **Element Plus** and **TailwindCSS**, ensuring strict design system alignment across multi-stage recruitment dashboards.
 - Engineered a robust state management and data-fetching layer by combining **Pinia** with **TanStack Query (Axios)**, implementing advanced caching, background revalidation, and optimistic updates to eliminate redundant API requests.
 - Optimized application performance and vitals, achieving significant bundle size reduction and rendering speedups through **lazy loading, debouncing, and dynamic component splitting**.
 - Established **code quality** standards through comprehensive refactoring, strict TypeScript typing, and maintaining high performance for complex data-heavy recruitment metrics layouts.
 - * Backend:
 - Architected and scaled a RESTful API using **Laminas Mezzio (PHP)** and **MVC** Architecture to manage recruitment lifecycles and allocation metrics for **10,000+ profiles**.
 - Implemented the **CQRS** pattern by isolating read and write paths using **Redis Cache**, **Elasticsearch**, and **MariaDB**, effectively eliminating database bottlenecks and optimizing API response times.
 - Implemented data access layer using **Doctrine ORM**, utilizing entity mapping and repositories.
 - Built a decoupled event-driven pipeline using **Kafka** and **background services** to process candidate and job creation (**500+ records/event**), ensuring zero-loss event streaming during peak traffic.
 - **EngiBase / EngiConnect / LearningConnect**
 - * Domain: HRM.
 - * Position: Fullstack.
 - * Technologies and Responsibilities:
 - Developed and maintained web application using **Laminas Zend (PHP)** and **MVC** Architecture.
 - Architected and structured a highly scalable UI using **HTML, CSS, JavaScript, and jQuery**.
 - Designed and managed relational databases with **MariaDB**, including schema design, **indexing strategies**, and query optimization.
 - Implemented data access layer using **Doctrine ORM**, utilizing entity mapping and repositories.
 - Maintained, debugged, and optimized existing codebase to improve system stability and performance.

- **GGG Metaverse**

- * Domain: Metaverse.
- * Position: Frontend.
- * Technologies and Responsibilities:
 - Architected and structured a highly responsive frontend application using **Next.js (TypeScript)** and **Atomic Design** pattern, establishing a modular, scalable component hierarchy across the platform.
 - Engineered a real-time event-driven messaging layer by integrating **GraphQL (AWS AppSync)**, ensuring seamless, low-latency communication and instant file/image exchanges.
 - Optimized global state management and data caching by leveraging **Zustand** for lightweight reactive states combined with **SWR**, implementing smart revalidation and optimistic UI updates to enhance user experience during heavy interactive sessions.
 - Designed complex UI interactions, including cross-platform responsive behaviors, custom **multi-touch gesture handling** (mobile zoom, double-click), and dynamic **third-party video meeting** integrations.
 - Optimized heavy chat room performance by implementing **Cursor-based Pagination** and **DOM Virtualization**, reducing API latency for message history loading while maintaining a constant memory footprint.
 - Streamlined deployment and infrastructure orchestration by managing automated CI/CD pipelines via **AWS Amplify**, securing reliable asset distribution and storage with **AWS S3** and **DynamoDB**.

- **Fitness Journey [Android / iOS]**

- * Domain: Web3.
- * Position: Frontend
- * Technologies and Responsibilities:
 - Engineered a cross-platform mobile application using **Flutter**, architecting a modular and reactive UI ecosystem capable of rendering complex fitness data metrics.
 - Optimized client-side state architecture using **Provider** and **Consumer** patterns, ensuring reactive, high-performance UI updates and reducing unnecessary widget re-renders for a fluid user experience.
 - Architected a secure non-custodial wallet integration by embedding a client-provided **Web3 SDK**, enabling seamless **cryptographic authentication**, smart contract interactions, and real-time NFT reward distribution.
 - Integrated **Auth0** for enterprise-grade user authentication and session management, implementing secure token rotation and end-to-end encryption protocols.
 - Spearheaded a comprehensive application rebranding in tight **collaboration** with UI/UX designers and backend teams, standardizing design tokens, themes, global colors, and component naming conventions.

Programming Skills

- **Languages:** PHP, TypeScript/JavaScript (ES6+), Dart, HTML, CSS/SCSS/SASS.
- **Libraries & Frameworks:** Laminas Zend & Mezzio (PHP), React.js/Next.js, Vue.js, Flutter, Pinia, Zustand, Zod, Axios, Styled Components, TailWindCSS, TanStack Query, Elasticsearch, redis, kafka.
- **Tools & Technologies:** AWS, Firebase, Docker, Git/GitHub, RESTful/GraphQL API, MariaDB, Doctrine 2, Elasticvue, Element Plus, Shadcn, Figma, Jira.
- **Soft Skills:** Multitasking, Problem Solving, Communication, Teamwork, Agile/Scrum.

Education

- **Ton Duc Thang University**

Bachelor of Science in Software Engineering

HCMC, VN

Sep. 2019 – Sep. 2024

Certifications and Courses

- **IELTS 5.5 (IDP Education - Jul. 2023):** Listening: 5.0; Reading: 6.0; Writing: 6.0; Speaking: 5.5
- **Great Front-end:** Algorithms and Data Structures, System Design.
